

MOBILE DATA COLLECTION IN GOVERNMENT

An Introduction to Open Data Kit

Anup Krishna P
Specialist MIS, RGSA PMU,
Local Self Government Department,
Govt. of Kerala
Ph: 94960 46910

OPEN DATA KIT (ODK)

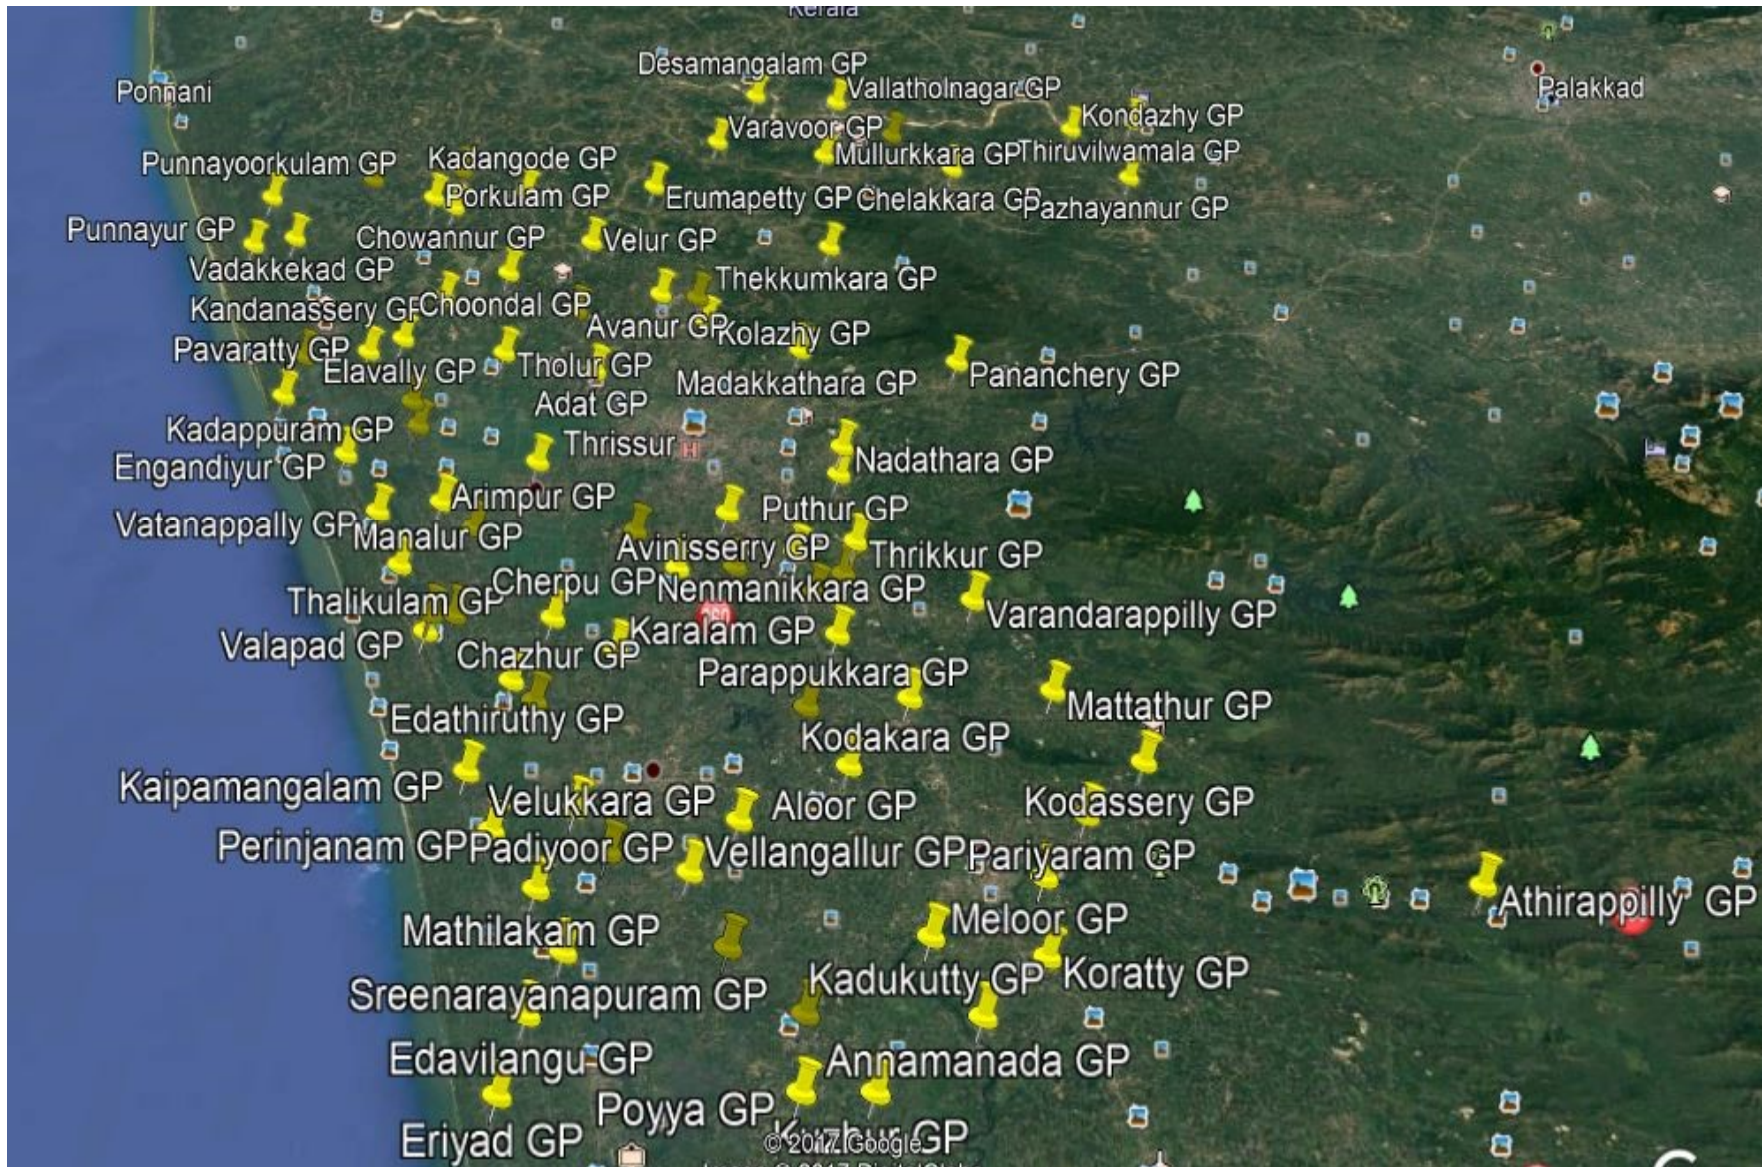

- Open-source suite of tools for Mobile Data Collection internationally accepted and adopted.
- Implemented in many countries worldwide in Government Projects.
- Mobile data collection and GPS based Geographic Information System implemented free of cost
- User level and data level security incorporated
- Interoperability with other Open Source Tools like Open Street Map, FormHub, Enketo, KoboToolbox, Drupal etc

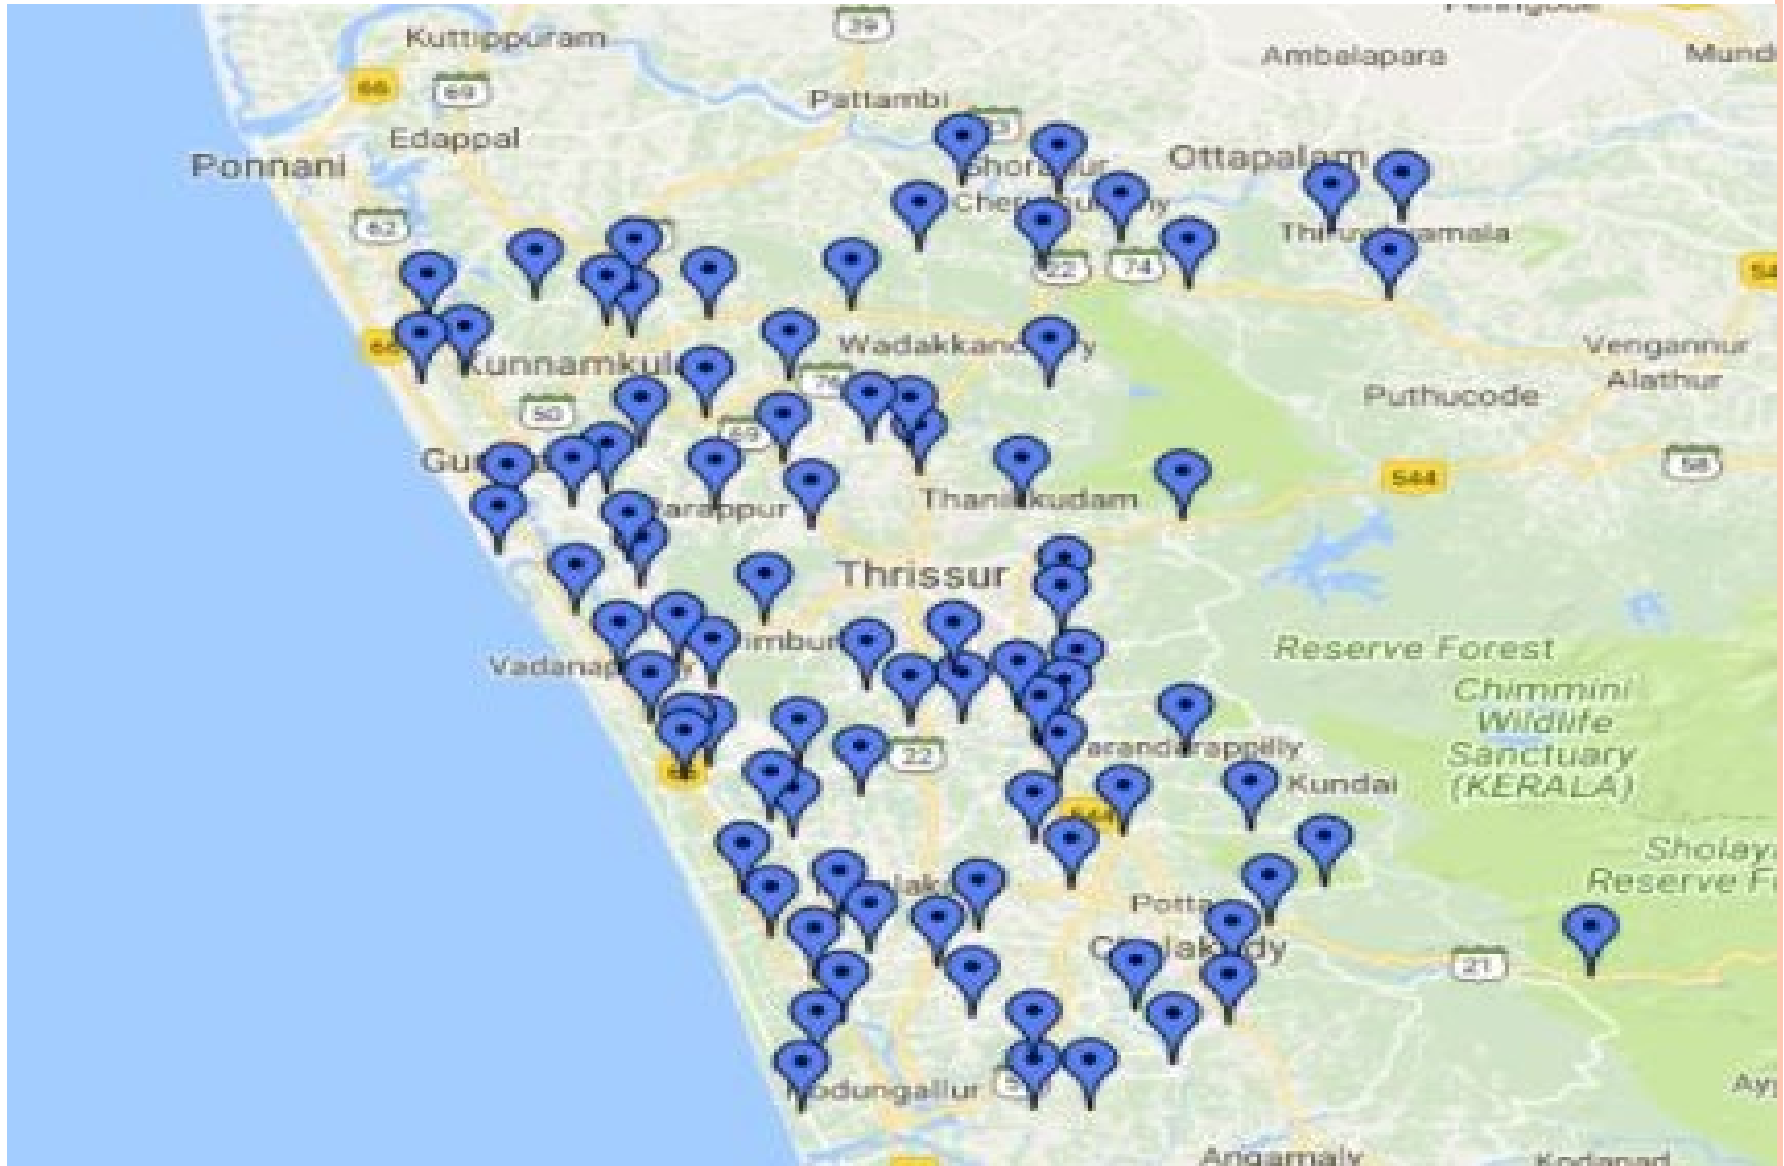

ODK Mobile Data Capturing

GRAM PANCHAYATS IN THRISSUR- SATELLITE

GRAM PANCHAYATS IN THRISSUR-MAP

OPEN SOURCE AND OPEN DATA POLICY

- Open Government Data and Open Data Policy under NDSAP- National Data Sharing and Accessibility Policy
- Data has to be published in open format like csv, xls, odf, xml, KML (Keyhole Mark-up Language used for Maps) etc
- Govt. of Kerala, IT Cell Circular [2/701/2015 ITD](#) dated: 21/07/2016- orders to use open source software in Govt. Offices
- LSGD GO [2904/2016](#) dt:19/10/16 for procuring Android Mobile Phones for GPs

WHAT DEVICE TO HAVE IMPACT IN FUTURE

??

??

??

ADVANTAGES OF MOBILE DATA COLLECTION

- Very Portable , Small size and high versatility
- Cheap and getting cheaper
- GPS based data capture (Location Specific)
- Automatically solves the problem of connectivity
- Is sealed, self contained, rugged and very reliable
- Fewer data errors and reduce time lag in collection and analyzing of data. Work on the go.
- Various international standardized open source tools and facilities available.
- Effective solutions **today** need to consider the mobile phone as the primary platform for data collection and analysis.

CURRENT OPPORTUNITIES

- Enabling GPS based online Asset register for GP
- GPS based **real-time** monitoring and evaluation of Life Mission Project and Building Numbering
- GPS based **real-time** mapping of Roads and Bridges
- Can be customized and used for any field level **real-time** survey / data collection works of any type of data for any Department.

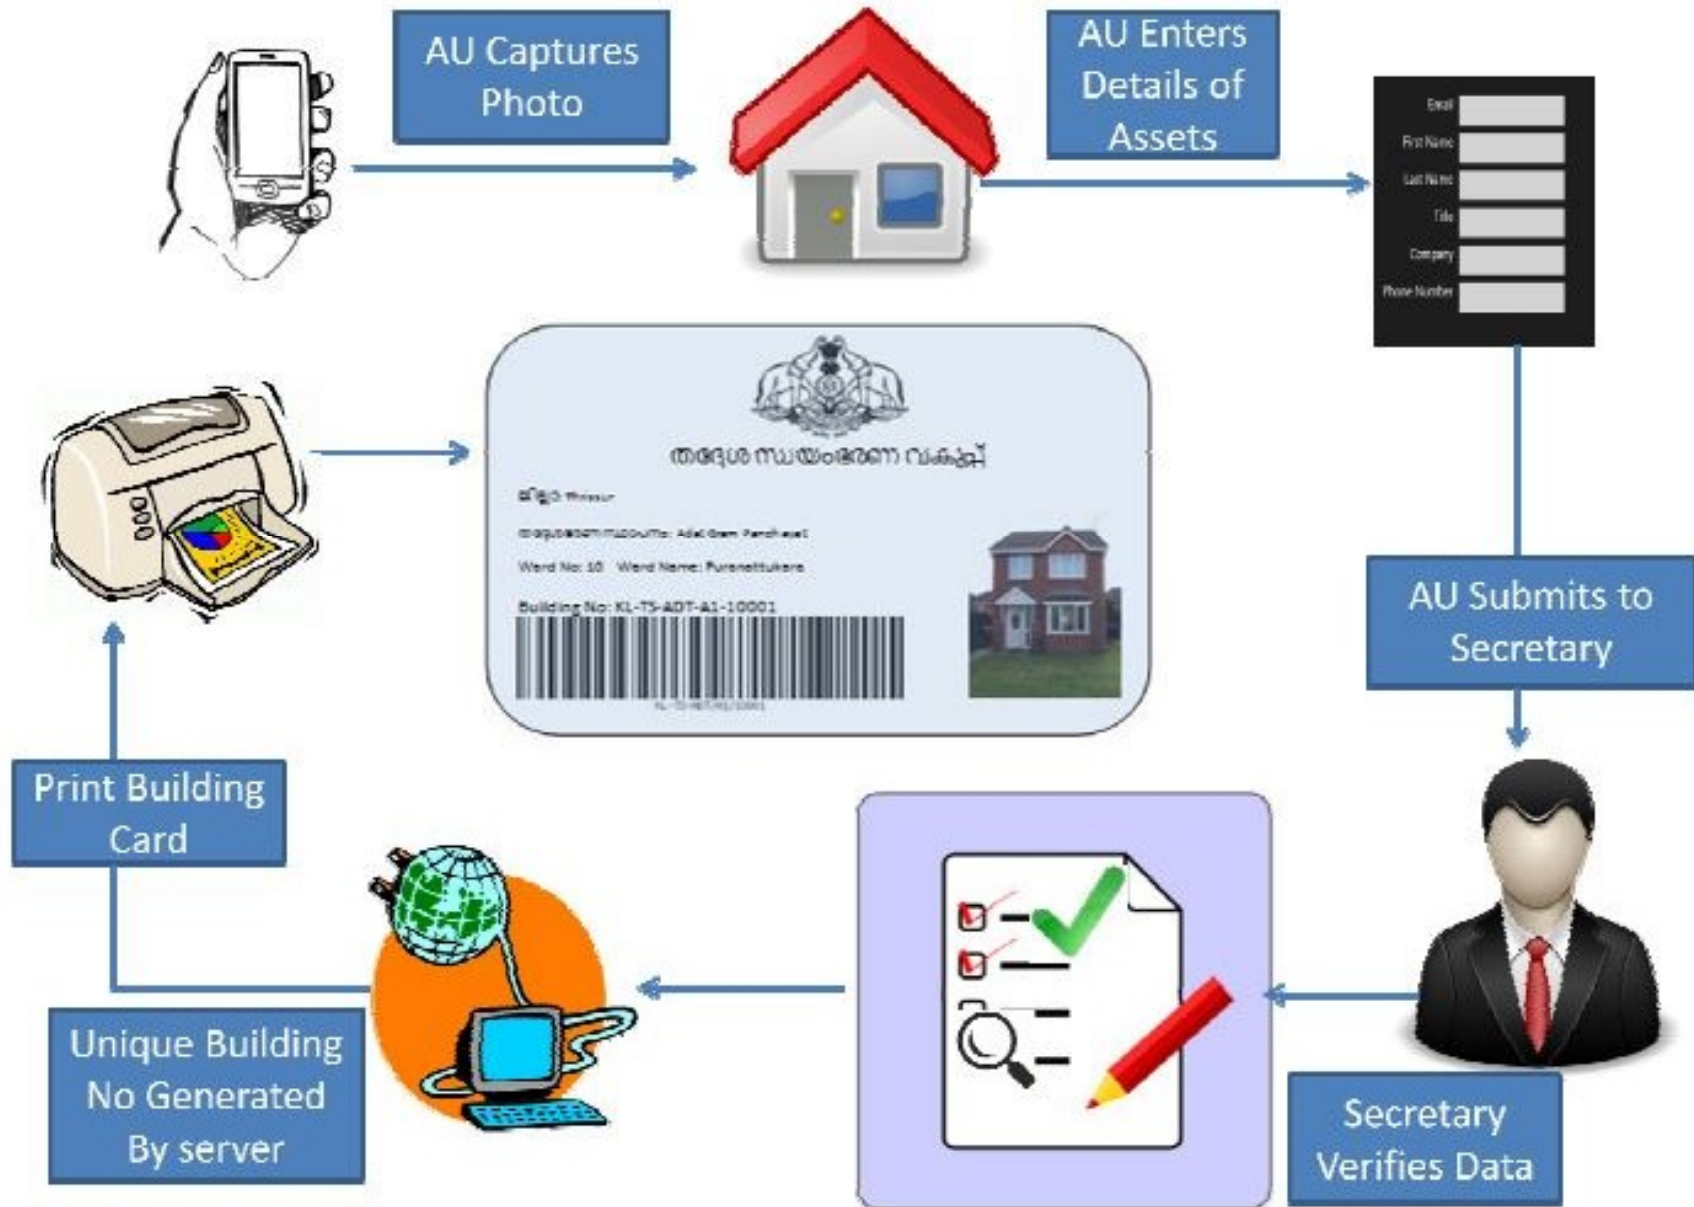

FUTURE OPPORTUNITIES

- Enabling GPS based GP Boundaries
- GPS based **real-time** monitoring and evaluation of all GP Projects and Schemes
- GPS based **real-time** surveys and field monitoring
- Enabling GP Spatial Planning
- Enabling GIS based GP Development Plan

Proposed Process Flow for Unique Building No Generation

TIME AND COST INVOLVED

- Entire Mapping completed in One week time
- Work done free of cost in less time
- Existing Human resource utilized
- Open Source Software (Open Data Kit) used for Server and Mobile Application.
- Training time required less than 1 hour
- Used mobile phones of GP Officials to collect data

OPEN DATA KIT WORLD WIDE

- International Space Station uses ODK to monitor progress on the Carbon for Water program
- Govt. of Pakistan Monitoring Health Officials with ODK
- Govt. of Afghanistan used ODK for fraud monitoring of the 2010 elections
- Africa Soil Information Service is mapping soil conditions of Africa with ODK
- United States is using ODK to gather emergency preparedness and response-related data in the field for natural hazards like storm, flood or tornado
- More details at <https://opendatakit.org/about/deployments/>

OPEN DATA KIT IN INDIA

- IKP Centre for Technologies in Public Health (ICTPH) enrolled 3,000 households (12,500 individuals) for a comprehensive primary healthcare delivery model in Tamil, Nadu.
- PATH is piloting ODK for use as a digital birthing assistant with clinical decision support, management of patient information, and as a tool for communication and education.
- ODK is being used in UC Berkeley's Health in Hands project in Mumbai and Karnataka.
- UNICEF and the children of Kolkata are mapping their community with ODK.

OPEN DATA KIT IN KERALA-DDP OFFICE

- DDP Office, Thrissur implemented Open Data Kit Server for Mobile based data collection from GPs
- Collected basic & spatial data of 86 Gram Panchayats using ODK through Android Mobile Phones.
- Visualized the data to create a GIS Map of GP's
- Pilot Project Completed in a weeks time.
- Project completed free of cost with existing man power and available resources.
- Project of similar nature if done commercially would have cost huge amount and considerable time.
- Proposed to map all Assets of GP to create an online GIS based Asset Register for GP
